

Angular Developer with 4+ years of professional experience designing, developing, and deploying robust enterprise-level web applications. Proficient in Angular (v14+), TypeScript, JavaScript (ES6+), and RxJS for efficient asynchronous data handling. Proven track record in building scalable, reusable UI components and optimizing frontend performance to improve page load times and user engagement. Adept at integrating complex RESTful APIs, managing state, and collaborating in Agile environments to deliver clean, maintainable, and pixel-perfect code.

SKILLS

Frameworks / Languages	Angular (v2 to v21), TypeScript, JavaScript (ES6+), HTML5, CSS3, SCSS.
Libraries	Angular Material, Bootstrap, CSS Grid, PrimeNg, RxJs, NPM.
State Management	NgRx, Reactive Forms, Signal.
Tools & Platforms	Git, GitHub, Postman, Jira, VS Code.
AI Tools	GitHub Copilot, Google Antigravity, Cursor, Claude Code.
Miscellaneous	Component-Based Architecture, Express.js, Node.js, MySQL, REST API Integration, JSON .
Soft Skills	Problem Solving, Effective communication and problem-solving, time management.

TECHNICAL EXPERIENCE

Angular Developer

Sag Infotech

April 2024 — Present

Jaipur, Rajasthan

- Engineered high-performance data tables leveraging PrimeNG, implementing custom column persistence, lazy loading, and advanced filtering to smoothly process large-scale financial datasets without UI lag.
- Built an intuitive drag-and-drop website builder enabling non-technical users to create and customize websites, increasing user onboarding efficiency.
- Implemented automatic code generation to produce clean, deployment-ready HTML5/TypeScript output, reducing manual development effort.
- Optimized real-time UI rendering and state management using RxJS, ensuring a seamless, lag-free editing experience.
- Designed mobile-first interfaces using flexible layouts and CSS Grid systems to ensure responsiveness across all major browsers and devices.
- Developed a reusable UI component library with PrimeNG, standardizing design patterns and accelerating feature delivery cycles.
- Enhanced final site performance by integrating automated asset optimization and minification, achieving Lighthouse scores of 90+ for generated websites.
- Developed a comprehensive GST Taxation SaaS application for tax professionals, streamlining filing, payment processing, and regulatory compliance for 1,000+ business entities.
- Engineered dynamic, high-performance data tables using PrimeNG, featuring customizable column persistence, advanced filtering, and bulk-action capabilities to handle large financial datasets.
- Implemented multi-tenant architecture patterns to improve usability and efficiency for firms managing multiple client portfolios within a single, secure session.
- Integrated secure RESTful APIs for automated tax calculations and ledger synchronization, ensuring data integrity across complex financial workflows.

SDE-1

Stoild

Dec 2023 — April 2024

Jaipur, Rajasthan

- Developed Angular applications using API-based architecture, demonstrating strong expertise in the Angular framework.
- Delivered application features using Agile Scrum methodology by breaking down development into multiple sprints.
- Developed a robust data-access layer by integrating RESTful APIs with Angular's HttpClient, ensuring type-safety through the implementation of TypeScript interfaces and models.
- Utilized RxJS operators such as switchMap, mergeMap, forkJoin, and BehaviorSubject to efficiently manage asynchronous data streams and state updates.
- Created custom Angular services and interceptors for centralized API communication, error handling, request logging, and token management.
- Collaborated closely with backend teams to define API contracts, troubleshoot integration issues, and optimize data exchange workflows.
- Integrated third-party libraries and REST APIs to extend application functionality while maintaining performance and security standards.
- Refactored legacy features to take advantage of Angular 14 Standalone Components, reducing module complexity and improving the application's initial bundle size.
- Leveraged Angular 14 Standalone Components to implement granular lazy loading at the component level, bypassing the overhead of traditional NgModules.

- Developed a client-side inventory management system to track and manage service center assets.
- Implemented real-time inventory tracking to monitor stock levels and updates.
- Implemented advanced search, filtering, sorting, and pagination features for large inventory datasets, enhancing user productivity.
- Implemented lazy loading and route guards to improve application performance and secure access to inventory management modules.
- Implemented audit tracking and activity logging features to maintain a complete history of inventory modifications and user actions.
- Added automated email notifications to alert users about inventory changes and important updates.
- Secured sensitive asset data by implementing Country Code Based Access and Role-Based Access Control to restrict inventory edits to authorized personnel.
- Developed complex reactive forms with custom validator to ensure data integrity and reduce user input errors during asset registration.
- Built comprehensive service center management features to streamline operations.

PROJECTS

SDMT - Website Builder Platform

- A low-code website creation platform that enables businesses and individuals to build, customize, and publish professional websites without coding expertise. The platform offers drag-and-drop page design, reusable components, template-based development, real-time previews, theme customization, and automated code generation. It simplifies website development while ensuring responsive design, performance optimization, and cross-browser compatibility.
- **Technologies:** Angular 17, Angular 21, TypeScript, JavaScript, PrimeNG, RxJS, HTML5, CSS3, SCSS, REST APIs, JSON, Git.

SAG GST - GST Taxation & Compliance Platform

- A comprehensive GST compliance and taxation software solution designed for tax professionals, accountants, and businesses. The platform streamlines GST return filing, tax calculation, invoice management, compliance tracking, ledger reconciliation, and regulatory reporting. It supports multi-client management, secure financial data handling, and automated workflows to simplify complex taxation processes while ensuring compliance with evolving GST regulations.
- **Technologies:** Angular 8, TypeScript, JavaScript, PrimeNG, RxJS, HTML5, SCSS, REST APIs, Git.

LMS - Inventory Management System

- A web-based inventory and asset management solution designed for service centers to efficiently track, manage, and monitor organizational assets. The system provides real-time inventory visibility, asset registration, stock monitoring, automated notifications, and role-based access controls. It helps organizations maintain accurate inventory records, improve operational efficiency, and reduce asset mismanagement.
- **Technologies:** Angular 14, TypeScript, JavaScript, PrimeNG, HTML5, SCSS, Git.

RCAAID - Automobile Service Record Management Portal

- RCAAID is a web-based automobile service record management platform designed to digitally maintain and track vehicle service histories throughout their lifecycle. The system enables service centers, dealerships, and vehicle owners to store, manage, and access maintenance records, repair details, service schedules, warranty information, and vehicle history from a centralized platform. The portal provides real-time access to service records, automated service reminders, customer and vehicle management, and comprehensive reporting features. By digitizing vehicle maintenance data, RCAAID helps improve service transparency, streamline workshop operations, enhance customer experience, and ensure accurate record keeping for vehicles.
- **Technologies:** Angular 6, TypeScript, JavaScript, PrimeNG, Git.
